

Quality

Hockway UK, along with Corrpro Europe, operates a Quality Management System that is certified in accordance with ISO 9001:2008.

Quality Systems for Hazardous Area Equipment

Hockway also holds ATEX certification for transformer rectifiers and other cathodic protection equipment for use in hazardous areas.

This in-house designed and manufactured equipment allows Hockway to optimise the design of cathodic protection systems by locating cathodic protection equipment in hazardous areas, making cathodic protection systems cheaper, safer and easier to operate.

See the links below for a variety of other manuals and certificates related to our quality processes:
