

Pipelines

Hockway supplies the highest quality cathodic protection for buried and submerged pipelines as an effective secondary defence after factory and field-applied coatings. Our equipment, material, capabilities and expertise can cover your onshore assets' corrosion control needs with the most up-to-date effective and innovative methods available.

Lasting Experience

Our comprehensive, technical know-how comes with in depth experience. In fact, we have three decades worth of peace of mind to offer our clients, including up-to-date experience in the most challenging environments. For instance, we supply pipelines with custom designed DC/DC converters installed within remote control cubicles.

End-to-End Project Management Capabilities

We can support your onshore piping protection project at every stage of the process--from initial surveys to conceptual design to detailed design and from material supply to installation supervision and from commissioning to operation and maintenance.

System Management and Control

We can provide you with custom-designed remote monitoring and control systems that are easy to operate and maintain. Ongoing operation and maintenance services can be part of your package.
